

Alexander Cortez Conde

Automation Developer · RPA & Agentic AI Specialist

Toluca, Mexico · +52 722 125 3739 · cortez.conde.alexander@gmail.com · linkedin.com/in/alexander-cortez-conde

PROFESSIONAL SUMMARY

Automation Developer with 5+ years of experience designing, developing, and deploying RPA and agentic AI solutions in enterprise environments. Proven expertise with UiPath REFramework, Orchestrator, and SAP automation (Web & Desktop), with end-to-end ownership from requirements through production. Hands-on experience building agentic workflows using UiPath Agents, applying prompt engineering to guide agent behavior, and designing human-in-the-loop processes with AI guardrails and fallback logic. Skilled at combining deterministic RPA with AI-driven decisioning and integrating automations with REST APIs, Power BI, and SharePoint. Strong communicator across technical and business stakeholders, with a track record of managing vendor relationships and leading UAT cycles. Bilingual: Spanish (Native) · English (Advanced).

WORK EXPERIENCE

Automation Engineer * Warner Bros. Discovery

Jul 2025 – Present | Mexico City

- Designed and developed 4 SAP automation solutions (Web & Desktop) using UiPath REFramework, covering processes across multiple transaction codes — each saving an estimated 1–2 hours per execution and reducing manual error rates.
- Managed and monitored all production automations via UiPath Orchestrator, configuring triggers, assets, and queues, and tracking execution performance to ensure reliability and SLA compliance.
- Architected and built an agentic automation POC combining UiPath Agents, email parsing, and SharePoint integration: the workflow reads incoming emails, classifies them via an AI agent, creates categorized items in a SharePoint list, and visualizes results in a Power BI dashboard.
- Applied prompt engineering techniques to guide UiPath Agent behavior, defining confidence thresholds and fallback paths for unrecognized email categories.
- Designed a human-in-the-loop validation layer for low-confidence classifications and exception routing; conducted structured pre-UAT validation of AI-generated outputs before promoting to production.
- Explored UiPath Maestro for multi-agent orchestration across robots, agents, and human tasks through certification coursework and hands-on environment exploration.
- Initiated a Power Apps-based RPA project repository to centralize automation documentation, including an AI-assisted portal for onboarding TCS-transitioned bots and future projects.
- Assumed ownership of production-critical automations from vendor transition (Capgemini, TCS), diagnosing failures and restoring operational stability with minimal downtime.
- Developed Python scripts to automate data extraction, filtering, and reporting, reducing manual analysis time and improving accuracy for operations teams.
- Implemented resilience mechanisms and exception-handling patterns to ensure automation reliability in complex, unstable SAP environments.

Automation Engineer * Bosch

Aug 2022 – Jun 2025 | Mexico City

- Delivered 20+ process automation initiatives across multiple business units, reducing manual effort by up to 80% and improving operational throughput at scale.
- Built and orchestrated end-to-end automations integrating Automation Anywhere with REST APIs, Web UI, and SAP — including a centralized solution generating 1,000+ support tickets across internal teams.
- Developed internal tools and applications using Power Apps and Power Automate to support information management, reporting, and stakeholder decision-making.
- Built operational Power BI dashboards for KPI tracking and data analysis, enabling data-driven decisions across business areas.
- Led SAP automation projects with complex data validation, cross-system logic, and Excel-based processing using UiPath REFramework.
- Collaborated on full-stack web application development (React, .NET, SQL) using Git, Bitbucket, and CI/CD pipelines (Bamboo).
- Delivered internal technical training programs and mentored junior developers, enabling UiPath certification readiness and raising overall team capability.
- Managed vendor follow-up and issue tracking across 600+ Jira tickets, identifying recurring failures and contributing to process improvement initiatives.

Jr. RPA Developer * **Go2Networks**

Mar 2021 – Jun 2022 | Mexico City

- ▶ Automated documentation and reporting workflows using Automation Anywhere (A360), reducing processing time by 50%.
- ▶ Streamlined data collection and analysis for the IT department, improving information quality for operational decision-making.

KEY SKILLS

RPA Platforms	UiPath (REFramework, Orchestrator, Agents, Maestro, Document Understanding) · Automation Anywhere A360 · Power Automate
Agentic AI	UiPath Agentic Workflows · Prompt Engineering · Human-in-the-Loop Design · AI Guardrails & Fallback Logic
SAP Automation	SAP Web & Desktop · S/4HANA
Programming	Python · SQL · JavaScript · React · .NET
BI & Tools	Power BI · Power Apps · SharePoint · Excel · Jira
Dev Practices	CI/CD (Bamboo) · Git · Bitbucket · UAT Management · Change Control
AI Tools	UiPath Studio AI · Claude · Cursor · Antigravity · Pencil

CERTIFICATIONS

- ▶ *UiPath Automation Developer Professional (In Progress)*
- ▶ UiPath Agentic Automation Associate
- ▶ A360 Agentic Process Automation Developer (Automation Anywhere)
- ▶ Automation Anywhere RPA Advanced Professional (A360)
- ▶ UiPath Complete RPA Developer

EDUCATION

Bachelor's Degree in Mechatronics Engineering · Instituto Politécnico Nacional (IPN) · UPIITA · July 2022
Thesis: Optimization of PID Controllers Using Evolutionary Algorithms (GA, PSO, DE)
